

DYROS manifolds

- specially developed for coolants to plastic moulds

The Dyros manifold offers a quick and safe way to tidy up the coolant tubes on the extruder
Its compact construction facilitates shorter tubes and mounting closer to the mould.

The shorter tubes makes the work space more tidy - and thus safer for the operator. The distributor can be used wherever small dimensions, dependability and safety is a must.

All connectors have built in valves which are leak proof - even at very low pressures. A locking device automatically releases, when a nipple is pressed against the connector. This feature makes one hand operation of the connector possible.

Manifold with 3/4" hose fittings		Connectors	Height (H)	Length (L)	Width (W)	Art.No.
